                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A novel D-leucine-containing Conus peptide: diverse conformational dynamics in the contryphan family.";
J. Pept. Res. 54:39-99(1999)
1. Sept. Res. 54:39-91(1999)
1. SUBCELLULAR LOCATION: Secreted.
1. TISSUE SPECTROITY: Expressed by the venom duct.
1. MASS SPECTROMETRY: MW=888.4; METHOD=LSI; RANGE=1-8; NOTE=Ref.1.
2. SIMILARITY: Belongs to the contryphan family.
D-amino acid; Direct protein sequencing; Toxin.
                                                                                                                                                                                                                               Bacteria, Proteobacteria, Gammaproteobacteria, Enterobacteriales,
Enterobacteriaceae, Escherichia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .

Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the invention related by UNGSPD (vascular endochelial growth factor). The invention related method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		
WO200152875-A1. 26-JUL-2001. 18-JAN-2001; 2001WO-US001533. 18-JAN-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0204590P. (LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiogor i lymphangiogenesis, is produced by cyclizing a peptide loop fractor and exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the invahose 3-dimensional structure is modelled on the expose loop of hygge (vascular endochelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring		/note=
WO200152875-A1. 26-JUL-2001. 18-JAN-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0204590P. (LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop frafrom an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of by WEGFD (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring	×	
18-JAN-2001. 18-JAN-2001; 2001WO-US001533. 18-JAN-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0204590P. (LUDM-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop fraffer man exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the invance of the superference of the invention relates method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		0152875-A1.
26-JUL-2001. 18-JAN-2001; 2001WO-US001533. 16-MAY-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0204590P. (LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiogor or lymphangiogenesis, is produced by cyclizing a peptide loop from an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the invention related by used loop of the invention related method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		
18-JAN-2001; 2001WO-US001533. 18-JAN-2000; 2000US-0176293P. 16-MAY-2000; 2000US-0176293P. (LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiogor in lymphangiogenesis, is produced by cyclizing a peptide loop from an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of by VEGFD (vascular endochelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		UL-2001.
18-JAN-2001; 2001WO-USCOISSS. 18-JAN-2000; 2000US-017629JP. 16-MAY-2000; 2000US-0204590P. (LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop frafrom an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of WEGFD (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		
18-JAN-2000; 2000US-017629JP. 16-MAY-2000; 2000US-020459OP. (LUDM-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop frafrom an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of whose 3-dimensional structure is modelled on the expose loop of wedgeD (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring		
16-MAY-2000; 2000US-0204590P. (LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiogor or lymphangiogenesis, is produced by cyclizing a peptide loop fractor man exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the invention relates whose 3-dimensional structure is modelled on the expose loop of WUGFD (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring		
(LUDW-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop fractom an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of NVGFD (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		
(LUDM-) LUDWIG INST CANCER RES. Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angioc or lymphangiogenesis, is produced by cyclizing a peptide loop frafrom an exposed loop of a growth factor protein by oxidizing the fresidues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of whose 3-dimensional structure is modelled on the expose loop of wedge (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring		
Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop frafrom an exposed loop of a growth factor protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inventon relates whose 3-dimensional structure is modelled on the expose loop of VEGFD (vascular endothelial growth factor). The invention relates method of producing a monomeric monocyclic peptide by a measuring method of producing a monomeric monocyclic peptide by a measuring		nad dalak howe the
Achen MG, Hughes RA, Stacker S, Cendron A; WPI; 2001-442248/47. Novel monomeric monocyclic peptide, used to interfere with angiog or lymphangiogenesis, is produced by cyclizing a peptide loop fractor is protein by oxidizing the residues. Claim 49; Page 32; 102pp; English. The sequence represents a monomeric monocyclic peptide of the inv whose 3-dimensional structure is modelled on the expose loop of WEGFD (vascular endothelial growth factor). The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human CC Whose 3-dimensional structure is modelled on the expose loop of human CC WEGPD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betaction distances on opposite antiparallel strands of a petide loop fragment from an exposed loop of a growth factor protein and cyclic peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis, covascularisation or lymphangiogenesis in a mammal with a condition of characterised by anglogenesis in evvascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psociasis, arthropathy, hemangionm, vascularised malignant or benign tumour, post-recovery creamers, substance-induced neovascular settions induced neovascular settions induced neovascular settions in induced neovascular settings. Appetention of the liver, excessive condition induced neovascular sequelae, or chronic liver, infertion is the monocide of neovascular sequelae, or chronic liver, infertion is diabete induced neovascular sequelae, appertunion induced neovascular seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "the two conformation determining regions C1 and C2 which flank the protease recognition site peptide P are provided to position the two fluorophores within 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       infection. The peptides are also used to modulate vescular permeability in a mammal (the mammal has a condition characterised by fluid in a mammal (the mammal has a condition characterised by fluid or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VGGF. VGGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat activity induced as a construction, especially rheumatoid arthitis, psoriasis and chronic inflammation, especially rheumatoid arthitis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fluorogenic substrate; fluorophore; protease activity; assay; visible fluorescence; in situ detection; frozen tissue section; histology; arthritis; emphysema; thrombosis; cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protease substrate peptide with fluorophore at each terminus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptides by oxidising the cysteine residues. The monocyclic peptides, dimerial biocyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, corrected by angiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, heat or cold trauma, substance-induced neovascularisation of the liver, excessive crauma, substance-induced neovascularisation of the liver, excessive trauma, substance-induced neovascularisation of the liver, excessive creams, the peptides are also used to modulate vascular permeability in a mammal the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. VEGF-C or D and are also used in combination with an anti-inflammatory agent, to treat a continuation inflammatory agent, and and administration and accumental accumental and accumental accumentation with an anti-inflammatory agent, to treat a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

/note= "peptide comprising a protease recognition site"

label= P

Peptide

or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine Novel monomeric monocyclic peptide, used to interfere with angiogenesis,

Region

```
AAW82023-W82240 are peptides used in the construction of a fluorogenic composition which is used for the detection of protease activity in biological samples. The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides, proteins, peptides, lipids, phopholipids, glycolipids, glycoproteins, steroids or polymers. In addition, attachment of a hydrophobic group to amolecule can be used to enhance uptake by cells. The composition is composed of P = peptide comprising a protease binding site for the protease, F1, F2 peptides = fluorophores where F1 is attached to the amino terminal amino acid and F2 is attached to the carboxyl terminal amino acid and S1, S2 peptides = when present, are peptide spacers where S1, when present, is attached to the carboxyl terminal amino acid, and S2, when present, is attached to the carboxyl terminal amino acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protease binding site; protease; protease indicator; fluorescent signal; detection; protease activity.
                                                                                                                                                                                                                                              New fluorogenic compositions - containing 2 fluorophores separated by a peptide comprising a protease binding site, used for detecting protease activity in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                64.3%; Score 36; DB 2; Length 9; 50.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detecting activity of a processe. The substrate agrees with the generic formula (S1)n-C1(F1)-P-C2(F2)-(S2)k in which a peptide P of 2-8 amino acids comprising a recognition site for the processe is flanked by conformation determining regions (C1 and C2) of 1-3 amino acids. C1 and C2 are labelled by fluorophore groups (F1 and F2, respectively) costitioned within 100 amgstroms of each other. Additional peptide spacers of 1-50 amino acids (S1 and S2) may also be present (i.e. n and k = 0 or 1). Fluorogenic substrates corresponding to the generic formula are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence is a specific example of a fluorogenic substrate for
                                /note= "the two conformation determining regions C1 and C2 which flank the protease recognition site peptide P are provided to position the two fluorophores within 100 angstroms of each other"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to detect or localise proteases in biological specimens, esp. in frozen tissue sections or to monitor protease activity in stored reagents. Changes in protease activity are associated with e.g. arthritis, emphysema, thrombosis and cancer metastasis. (Updated on 25-MAR-2003 to
                                                                                                                                           /note= "labelled by acceptor fluorophore F2 rhodamine X acetamide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protease activity; fluorphore; detection; fluorogenic; cellular uptake;

The present peptide contains a protease binding site. It is used to produce novel reagents whose fluorescence increases in the presence of produce novel reagents whose fluorescence increases in the presence of particular proteases. These fluorogenic protease indicators (substrates) corporated a high intensity fluorescent signal at a visible wavelength when they are digested by a protease. The fluorogenic indicators have the contensing a protease binding site e.g. AAM46520-53, AAM46550-F1 a peptide containing a protease binding site e.g. AAM46520-53, AAM46550-F1 n, k = containing a protease binding site e.g. AAM46520-53, AAM46554-58 n, k = containing a protease binding site e.g. AAM46520-53, AAM46554-58 n, k = containing a protease of conformation-determining regions that introduce a containing a protease indicators and no fless than 100 Angstrom. When n is 1, S1 is joined to the terminal carboxy group of C1 by a peptide bond, and when k is 1, S2 is joined to the terminal carboxy group of C2 by a containing the protease indicators are used for detecting protease activity in a biological sample. The sample is contacted with the indicator and any change in fluorescence is detected, an increase in contacted with the contact and any change in fluorescence is detected, an increase in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /______the two conformation determining regions C1 and /note= the two conformation determining regions C1 and C2 which flank the protease recognition site peptide P are provided to position the two fluorophores within 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "the two conformation determining regions Cl and C2 which flank the protease recognition site peptide P are provided to position the two fluorophores within 100 angstroms of each other"

The present sequence is a specific example of a fluorogenic substrate for detecting activity of a protease. The substrate agrees with the generic detecting activity of a protease. The substrate agrees with the generic correction of the state of the protease is flanked by acids comprising a recognition site for the protease is flanked by conformation determining regions (Cl and C2) of 1-3 amino acids. Cl and C2 are labelled by fluorophore groups (Fl and F2, respectively) constitioned within 100 angstroms of each other. Additional peptide spacers positioned within 100 angstroms of each other. Additional peptide spacers of 1-50 amino acids (Sl and S2) may also be present (i.e. n and R = 0 or conformation or to monitor protease activity in stored reagents. Changes in protease activity are associated with e.g. arthritis, conrect PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protease activity; fluorphore; detection; fluorogenic; cellular uptake; conformation change.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                              AAW82023-W82240 are peptides used in the construction of a fluorogenic composition which is used for the detection of protease activity in biological samples. The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides, proteins, peptides, lipids, phopholipids, glycolipids, glycoproteins, steroids or polymers. In addition, attachment of a hydrophobic group to an necule can be used to enhance uptake by cells. The composition is composed of P = peptide comprising a protease binding site for the protease, F1, F2 peptides = fluorophores where F1 is attached to the amino terminal amino acid and S1, S2 peptides = when present, are peptide spacers where present, is attached to the amino terminal acid, and S2, when present, is attached to the amino terminal acid, and S2, when

The present peptide contains a protease binding site. It is used to produce novel reagents whose fluorescence increases in the presence of particular proteases. These fluorogenic protease indicators (substrates) provide a high intensity fluorescent signal at a visible wavelength when they are digested by a protease. The fluorogenic indicators have the containing a protease binding site e.g. AMW46520-53, AMW46560. Fl and F2 are peptide spacers e.g. AAW46550. Fl and F2 are fluorophores. Sl and S2 are peptide spacers e.g. AAW46554-58. n, k = 0 or 1. Cl and C2 are conformation-determining regions that introduce a bend into the composition which positions the fluorophores adjacent to each other with a separation of less than 100 Angstrom. When n is 1, S1 is joined to the terminal alpha -amino group of Cl by a peptide bond, and when k is 1, S2 is joined to the terminal carboxy group of C2 by a peptide bond. The protease indicators are used for detecting protease activity in a biological sample. The sample is contacted with the indicator and any change in fluorescence is detected, an increase in fluorescence indicating protease activity
                                                                                                                                                                                                                                                                                                                                Fluorogenic substrates for protease determination - having two closely spaced fluorophores flanking protease binding site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Protease detection; peptide cleavage; enzyme activity; fluorogenic; viral infection; cancer metastasis; emphysema; arthritis; thrombosis; haemophilia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

/note= "F2, where F2 is an acceptor fluorophore rhodamine X acetamide (R492)"
                                                                                                                                                                                                 The present invention describes fluorogenic compositions which can be used for the detection of protease activity. This can be useful as an indicator of viral infection, cancer metastasis, haemophilia, emphysema, thrombosis and arthritis. The fluorogenic compositions comprise a peptide, a peptide spacer and a donor and an acceptor fluorophore. The peptide is cleaved by a protease and the fluorophores can then be detected. The present sequence is one of the peptides described in the exemplification of the invention
                                                                                                         New fluorogenic compositions whose fluorescence level increases in the
                                                                                                                      presence of active proteases, useful for detecting and localizing protease activity in biological samples, particularly in frozen tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protease; indicator; chromophore; H-dimer; fluorescence; absorbance; nuclease; screening; fluorophore; substrate cleavage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "F1, where F1 is a donor fluorophore 5'-

This invention describes a novel indicator composition (referred as homodoubly labeled compositions) comprising a polypeptide backbone or a nucleic acid backbone joining two chromophores of the same species whereby the chromophores form an H-dimer resulting in quenching of the fluorescence of or a change in the absorbance of the chromophore, a decrease in fluorescence or a change in absorbance of the chromophore, a decrease in fluorescence or a change in absorbance indicates that the indicator is the polypeptide backbone. The indicates that the protease or subport inside a mammalian, yeast or insect cell. The composition bears or bytrophobic group such as Fmoc, 9-fluoreneacetyl group, 1-fluorenear bytrityl (Mtt), 4-methoxylic group, 6-fluoreneacetyl group, 1-fluoreneacetyl group, 1-fluoreneacetol group, 1-fl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              therefore they are easily detected in biological samples. The fluorogenic protease indicators utilise high efficiency fluorophores and are able to protease indicators utilise high efficiency fluorophores and are able to the quench is released funching while providing a strong signal when signal allows detection of very low levels of protease activity. Thus the fluorogenic protease indicators are particularly well suited for in situ detection of protease activity. ABWG037-ABWG0477 represent peptides use to illustrate the method described in the disclosure of the invention
                                          Indicator composition comprising polypeptide or nucleic acid backbone joining two same chromophores resulting in quenching of fluorescence of/change in absorbance of chromophores, useful for detecting protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               58.9%; Score 33; DB 5; Length 9; 50.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAU00643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                              The invention relates to a fluorogenic composition (I) for detecting the activity of a protease. (I) is useful for detecting the activity of a protease. (I) is useful for detecting the activity of activity of protease is detected in a histological section, cell culture activity of protease is detected in a histological section, cell culture or tissue section. The cell suspension is derived from the biological sample chosen from tissue, blood, urine, saliva, lymph or biopsy. The sample chosen from tissue, blood, urine, saliva, lymph or biopsy. The protease activity is detected by fluorescence micropolate, absorption microplate reader, fluorescent microplate reader, absorption microplate reader, flow cytometry, cader. (I) is useful for delivering a molecule into a cell, and for screening a test agent for the ability to modulate the activity of the protease activity in biological samples. (I) also acts as a protease inhibitor, thus useful as protease inhibitors. (I) enables detection of the protease activity, and provides a high intensity fluorescent signal at a visible wavelength when they are digested by a protease. The present sequence wavelength when they are digested by a protease. The present sequence

cell a nucleic acid coding for a protein, the level of which or its mRNA is greater than in a non-Peyer's patch cell. The preferred protein of the invention is a transcription factor or a protein that activates a transcription factor or b. c-jun related TF, Jun-D, STAT 3 cranscription factor selected from Jun-B, c-jun related TF, Jun-D, STAT 3 cranscription factor selected from Jun-B, c-jun related TF, Jun-D, STAT 3 cranscription for prote-oncogene, myc related, Mm23-M2, nucleoside chiphosphate kinase B, metastasis reducing protein, and C-est-I proto-oncogene, and p54. The preferred upregulated protein of the invention is selected from clusterin, T-cell surface glycoprotein CDS precursor, HSP 84, and Ca2+ dependent phospholipase A2 precursor and the mRNA is for a protein selected from the group. The method is useful for increasing or decreasing the level of a protein in a Peyer's patch cell, particularly in increasing antigen or vaccine delivery to M cells. The method may also be used to enhance transport of a drug through the gastrolintestinal tract (GIT). This sequence represents a membrane translocating peptide of the Query Match

                                                                                                                                                                                                                                                                                                                                                            (SARL-) SARLAN LTD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fragment
```

The invention relates to a novel method for increasing the levels of a protein in a Peyer's patch cell. The method comprises delivering to the

Example 6; Page 51; 147pp; English

factor.

Increasing the levels of a protein in a Peyer's patch cell, useful for targeted vaccine or drug delivery, comprises delivering to the Peyer's patch cell a transcription factor or an activator of a transcription

```
of at least 4 amino acids of the transport peptide. The composition is useful in treating a pathological disorder in an animal, as it protects an orally delivered active agent from enzymatic degradation in the gastrointestinal tract (GIT), and promotes absorption across epithelial cells liming the GIT. The present sequence is a polypeptide used in the exemplification of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 21, Application US/09227906

Sequence 21, Application US/09227906

Patent No. 6306365

GENERAL INFORMATION:
APPLICANT: Ruoslahti, Erkki
APPLICANT: Pasqualini, Renata
TITLE OF INVENTION: Method of Identifying Molecules That
TITLE OF INVENTION: Home to a Selected Organ in Vivo
NUMBER OF SEQUENCES: 44

CORRESPONDENCE ADDRESS:
ADDRESSER: Campbell & Flores LLP
STREET: 4370 La Jolla Village Drive, Suite 700
CITY: San Disgo
CUNTRY: United States
STREET: 92122
COMPUTER: EADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARR: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
PILICATION NUMBER: US/09/227,906
FILIGATION DATA:
COMPUTER: COMPUTER: UNIVERSET OF THE COMPUTER:
COMPUTER: PATENTING DATA:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pentapeptide (proctolin) associated with an identified neuron.";
Science 213:567-569 (1991)

-!- FUNCTION: Stimulates cardiac output and hindgut motility,
modulates visceral and skeletal muscle in many arthropods.
-!- SUBCELFULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Found in the lateral white neurons.
                                                                                                                                                                                                                                                                                                                                                                                                   .

Biochimie 71:521-531(1989).
-!- FUNCTION: Activates the expression of the trpBA genes encoding to two tryptophan synthase subunits. In the absence of the inducer (indoleglycerol phosphate), trpI binds upstream of the trpAB operon, overlapping its own promoter region.
-!- SIMILARITY: Contains 1 HTH 198R-type DNA-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                     STRAIN=PF01 C1S;

Stacker S, Hughes RA, WPI; 2001-442248/47. Achen MG,

Cendron A;

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGPD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic competitions) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, no enaminal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, condition is diabetic retinopathy, psoriasis, arthropathy, condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or clauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoned cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere content inflammation, to the train a characterised content inflammation, to treat a characterised content inflammation, especially rheumatoid arthritis, psoriasis and characterised.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modulation; nonclassical cadherin mediated cell adhesion, CAR, inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-18; cadherin-14; cadherin-15; T-cadherin; PB-cadherin, cadherin-16; cadherin, acadherin, acadherin, acceptor; II-cadherin; protocadherin; cadherin related neuronal receptor; II-cadherin; protocadherin; desemoglain; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cadherin-7 cell adhesion recognition cyclic peptide SEQ ID NO:1374.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

The present invention describes cauncing modulating comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating conclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a conclassical cadherin-they of a drug through the skin of a mammal, channeling delivery of a drug through the skin of a mammal, confined delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting apoptosis in a mammal, inhibiting concerning adoptosis in a mammal, inhibiting and separating of treating a demyeling drug delivery to the contral nervous system, treating a demyelinating neurological disease, conclassing vasopermeability in a mammal, enhancing adhesion of for increasing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating a delesion of foreign tissue in a mammal. They can also be used for treating a described and diabetes. The products can also be used for treating elerosis and in bioreactors. AAV646512 to AAV64612 represent specifically claimed peptides, and in AAV64513 to AAV64631 and AAV64813186 represent sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                    cadherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; ble-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            recognition (CAR) sequence. The MAs can be used for modulating comprising peptides which comprises a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating adhesion of monclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, chantery of a drug through the skin of a mammal, chantery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cangiogenesis in a mammal, chantering apoptosis in a nonclassical cadhering carpressing cells, preventing or treating a demyelinating neurological disease, blood vessel regression in a mammal, enhancing delivery to the central nervous system, treating a demyelinating neurological disease, contral nervous system, treating a demyelinating neurological disease, contral nervous system, in a mammal, enhancing of symptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age mammal. They can also be used for treating adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes, and AAV64651 to AAV64651 represent sequences used in the constant in the constant of the constant in the constant of the constant in the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                  New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulation; nonclassical cadherin mediated cell adhesion, CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-18; cadherin-113; cadherin-15; T-cadherin; PB-cadherin; cadherin-15; T-cadherin; cadherin; protocadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; rehematoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention describes cadherin modulating agents (WA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cecognition (CAR) sequence. The WAs can be used for modulating

crecognition (CAR) sequence. The WAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

commal, enhancing delivery of a drug through the skin of a mammal,

comman, inhibiting metastasis of a cancer in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

compressing cell, preventing or treating obesity in a mammal, stimulating

conclassical regression in a mammal, enhancing delivery to the

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal. They can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for treating act irreduing act itssue, or enhancing adhesion of foreign tissue in a

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

created macular degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diapences and in bioreactors.

AAVE6522 to AAVE64572 represent specifically claimed peptides, and

AAVE6523 to AAVE6631 and AAX213186 represent sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The present invention relates to novel compositions comprising peptides (ADK89300-ADK90584) from 191P4012(b) and related proteins. It was found that 191P4012(b), which maps to chromosome 1922-623.2, is aberrantly expressed in a number of cancers and so the compositions of the invention are useful in diagnosing, preventing and treating cancer, e.g. cancer of the prostate, bladder, kidney, colon, lung, pannerass, owary, breast, uterus or cervix and in eliciting a humoral or cellular immune response. To isolate genes that are overexpressed in prostate cancer, the derived from prostate cancer issues. The present peptide is the N-myristoylation site sequence present at position 218-223 in human
                                                                                                                                                                                                                                                                             Cytostatic; Immunostimulant; Vaccine; Gene Therapy; 191P4D12(b); cancer; prostate cancer; bladder cancer; kidney cancer; colon cancer; lung cancer; pancer; oancer; oancer; oancer; oancer; oancer; oancer; oancer; cervix cancer; immune response; human; chromosome 1q22-q23.2; Suppression Subtractive Hybridisation; SSH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising 191P4D12(b) proteins and polynucleotides, useful in diagnosing, preventing and treating cancer, e.g. prostate, bladder, kidney, colon, lung, pancreas or ovary and in eliciting a humoral or cellular immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g

                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cecognition (CAR) sequence. The MAS can be used for modulating

cnonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

cmammal, enhancing delivery of a drug the a tumour in a mammal, treating cancer in

cenhancing delivery of a drug to a tumour in a mammal, inhibiting

candiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

concressing vasopermeability in a mammal, enhancing drug delivery to the

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

cor reducing scar tissue, or enhancing adhesion of foreign tissue,

cor reducing scar tissue, or enhancing adhesion of foreign tissue,

cor reducing scar tissue, or enhancing adhesion of foreign tissue,

cor reducing can also be used for treating e.g. psoriasis, arthritis, age

cor reducing can also be used for detection and diagnosis and in bioreactors.

AAY6652 to AAX64572 represent specifically claimed peptides, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ď
The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The Mas can be used for e.g.

inhibiting adhesion of nonclassical radherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

ca mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

central nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating neurological disease,

conclassing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing sear tissue, or enhancing adhesion of foreign tissue in a

conclassing vasopermeation, multiple sclerosis and diabetes. The

correcting macular degeneration, multiple sclerosis and diabetes. The

correction and above used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and in bioreactors.

ANYSOSS2 to AAVSG457 represent specifically claimed peptides, and

conclassing vasopermeation of the present invention

The invention provides synthetic antiinflammatory peptides derived from interlaukin-2 (IL-2). They can be used for inhibition of adhesion of activated T-cells to ECM proteins such as fibronectin, laminin, collagen type-IV; inhibition of form of T-cell through ECM proteins preferably fibronectin; inhibition of T-cell through ECM proteins preferably fibronectin; inhibition of spontaneous or induced.

The profess Treel proliferation; inhibition of spontaneous or induced, preferably TRP-alpha induced cytokine secretion (e.g.IL-8, IL-1beta) by stimulated T-cells and intestinal epithelial cells. The anti-inflammatory computed and their derivatives are useful for preparing compositions for treating and/or alleviating chronic or acute inflammatory disorders and autoimmune diseases such as rheumatoid arthritis, diabetes type-I, unlipbe sclerosis, systemic lupus erythematosus, bowel inflammation, uveitis, and Crohn's disease. Sequences AAY85366-374 represent modified anti-inflammatory derivative peptides derived from the IL-2 derived anti-inflammatory peptide pepl (AAY85363)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic antiinflammatory peptide derived from IL-2 and its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

recognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

creamal, enhancing delivery of a drug through the skin of a mammal,

cenhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

congenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

conclassing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

mammal, or preventing pregnancy in a mammal. They can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

mammal, rhey can also be used for treating e.g. psoriasis, arthritis, age

conclassical decembracion, multiple sclerosis and diabetes. The

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

created macular degeneration, multiple sclerosis and diabetes. The

products can also be used for treating e.g. psoriasis, and phoreactors.

AAV60592 to AAV64572 represent specifically claimed peptides, and

charactery and present invention invention in a mammal invention of the exemplifical invention of the present sequences used in

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cerecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

chhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

cangiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing drug delivery to the

central nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

contassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

c.g. enhancing or directing neurite outgrowth, facilitating wound healing

c.g. reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating a psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The
                                                                                                                                                                            Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin, cadherin-5; cadherin-6; cadherin-7; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-12; cadherin; Cadherin; protocadherin; cadherin; cadherin; protocadherin; desmoglelin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid archritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                         Cadherin-15 cell adhesion recognition cyclic peptide SEQ ID NO:2154.
                                                                                                                                                                                                                                                                                                                                                                                                                               Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a peptide fragment derived from domain 1 of human beta-2 glycoprotein, a phospholipid binding serum protein. Isolated domain 1 of beta-2 GPI protein binds to and inhibits beta-2 GPI-dependent antiphospholipid antibodies. The fragments are useful as toleragens when they bind to the antibodies at the surface of a B call and triggers B cell anergy. The polypeptides and mimetics can be used for treating disorders associated with beta 2GPI-dependent aPL-associated pathologies, e.g. thrombosis, recurrent foetal loss, thrombocytopenia or autoimmune diseases such as systemic lupus erythematosus. The polypeptides can also be used to detect and purify antibodies. They can also be used in
products can also be used for detection and diagnosis and in bioreactors. AF406592 to AF406472 represent specifically claimed peptides, and AAA06573 to AAV64643 and AAZ33183 to AAZ33186 represent sequences used in the exemplification of the present invention
                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                         Human beta-2 glycoprotein I; beta-2 GPI; toleragen; B cell anergy; beta-2 gPI-dependent antiphospholipid antibody; thrombosis; recurrent foetal loss; thrombocytopenia; autoimmune disease; systemic lupus erythematosus; coagulation assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated domain 1 beta-2 GPI polypeptides, used for inhibiting antiphospholipid antibodies for treating, e.g. thrombosis.
                                                                                                              ;

                                                                                                                                                                                             This peptide or the peptides represented in AAR15751-81, AAR14723 and AAR14711 inhibit the rat FTs represented in AAR14712-22. They show FT inhibition at an ICSO of 0.01-10 microm. The most potent inhibitors are ones in which phenylalanine occurs at the third position of a tetrapeptide whose N-terminus is cysteine. The inhibitors have a farnesyl acceptor or inhibitor sequence within its structure and are capable of inhibiting the farnesylation of p21ras by FT. See also AAR14711-23 and AAQ14541-47. (Updated on 09-003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                 Compsn. comprising purified farnesyl-protein transferase - used to inhibit attachment of farnesyl moiety to RAS protein in malignant cells

```
transferase. They all obey a generic formula for the C-terminal sequence of 4-10 amino acid inhibitory peptides; the formula is -CAAX, where C=cysteine, A= any aliphatic, aromatic or hydroxy amino acid and X= any normal amino acid. Farnesyl transferase is involved in the farnesylation of various cellular proteins including the cancer related ras proteins. The transforming activity of ras is dependent on the localisation of the protein to membranes, a property which is thought to be dependent upon the addition of farnesyl groups. The peptide inhibitors are useful for treating cancers and ras-related cancers in particular. (Updated on 25-MAR-2003 to correct Pf field.)
       New farnesyl transferase inhibitor peptide(s) - based on farnesyl acceptor substrate carboxy terminal sequences, used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW04433-W04465 are peptide inhibitors of farnesyl transferase (FT) activity. The peptides block the attachment of prenyl groups to ras proteins in malignant cells of patients suffering from cancer or a precancerous state and as such are used to treat cancer. The peptides were identified by determining the ability of candidate substances to inhibit a FT enzyme, by inhibiting the transfer of a farnesyl moiety t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Farnesyl transferase; inhibitor; cancer; tumour; neoplasia; prenyl; ras protein; K-ras B; malignant; detection; identification.
                                                                                                                     AAR77800, AAR77805-R77838 are tetrapeptide inhibitors of farnesyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Assay for farnesyl transferase activity - by determining ability transfer farnesyl moiety to K-Ras B protein, partic. useful for identifying inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Farnesyl transferase peptide inhibitor used in cancer treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 30,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                            Sequence 199, Application US/09042107
Patent No. 6232287
GENERAL INFORMATION:
APPLICANT: Ruoslahti, Erkki
APPLICANT: Pasqualini, Renata
TITLE OF INVENTION: Molecules that Home to Various Selected Organs or
TITLE OF INVENTION: Tissues
FILE REFERENCE: P-LJ 2892
CURRENT APPLICATION NUMBER: US/09/042,107
CURRENT FILING DATE: 1998-03-13
NUMBER OF SEQ ID NOS: 436
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3614, Application US/09187859A

Patent No. 6358920

GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REFERENCE: 100086.407C1
CURRENT APPLICATION NUMBER: US/09/187,859A
CURRENT FILING DATE: 1998-11-06
NUMBER OF SEQ ID NOS: 4062.
